

BASIC 7

WEEKLY LESSON PLAN – WEEK 7

Learning Indicator(s)	B7.3.3.2		
Performance Indicator	B7.3.3.2.1 Describe the bearing of a point from another point		
Week Ending	28-10-2022		
FORM	B.S.7		
Subject	Mathematics		
Reference	Teachers Resource Pack, Learners Resource Pack, Textbook.		
Teaching / Learning Resources	Protractor, Meter Rule, Pair of divider, Pictures.		
DAYS	PHASE 1 : STARTER	PHASE 2: MAIN	PHASE 3: REFLECTION
MONDAY 24-10-2022	Learners brainstorm to explain the meaning of Cardinal Points.	<ol style="list-style-type: none"> Discuss the four cardinal points with the Learners. Assist Learners to use directional compass to measure bearings. <p>The four main directions of a compass are known as cardinal points. They are north (N), east (E), south (S) and west (W). Sometimes, the half-cardinal points of north-east (NE), north-west (NW), south-east (SE) and south-west (SW) are shown on the compass. The above compass shows degree measurements from 0° to 360° in 10° intervals with:</p> <ul style="list-style-type: none"> north representing 0° or 360° east representing 90° south representing 180° west representing 270° <p>When using a directional compass, hold the compass so that the point marked north points directly away</p>	Core Competencies; Can effectively evaluate the success of solutions they have used to attempt to solve a complex problem Implement strategies with accuracy

		<p>from you. Note that the magnetic needle always points to the north.</p>	
<p>TUESDAY 25-10-2022</p>	<p>Discuss with learners how to describe a bearing.</p>	<ol style="list-style-type: none"> 1. Demonstrate how to find the bearing from one point to another point. 2. Assist Learners to find bearings of points to another points. <p>A bearing is used to represent the direction of one point relative to another point.</p> <p>Eg. The bearing of <i>B</i> from <i>A</i> is 245°</p>  <p>State the bearing of the point <i>P</i> in each of the following diagrams:</p> <p>a.</p>  <p>Mark the angle in a clockwise direction by indicating the turn between the north line and the line joining the centre of the compass to the point <i>P</i>.</p> 	<p>Exercise;</p> <p>Describe each of the following bearings as directions.</p> <ol style="list-style-type: none"> a. 076° b. 150° c. 225° d. 290° <p>Core Competencies;</p> <p>Ability to select alternative(s) that adequately meet selected criteria</p>

		<p>The bearing of point P is 048°.</p> <p>b.</p>  <p>Mark the angle in a clockwise direction by indicating the turn between the north line and the line joining the centre of the compass to the point P.</p>  <p>The cardinal point S corresponds to 180°. It is clear from the diagram that the required angle is 60° larger than 180°. So, the angle measured in a clockwise direction from the north line to the line joining the centre of the compass to point P is $180^\circ + 60^\circ = 240^\circ$.</p> <p>So, the bearing of point P is 240°.</p>	
<p>THURSDAY 27-10-2022</p>	<p>Review Learners knowledge on the previous lesson.</p>	<ol style="list-style-type: none"> 1. Discuss the meaning of conventional bearing of a point with the Learners. 2. Assist learners to use protractor to find the angles of a bearing. 3. Learners in small groups to recognize true bearings as the angle measured. <p>The conventional bearing of a point is stated as the number of degrees east or west of the north-south line. We will refer to the conventional bearing simply as the direction.</p> <p>To state the direction of a point, write:</p> <ul style="list-style-type: none"> • N or S which is determined by the angle being measured 	<p>Core Competencies;</p> <p>Can effectively evaluate the success of solutions they have used to attempt to solve a complex problem Implement strategies with accuracy</p>

- the angle between the north or south line and the point, measured in degrees
- E or W which is determined by the location of the point relative to the north-south line

In the above diagram, the direction of:

- *A* from *O* is N30°E.
- *B* from *O* is N60°W.
- *C* from *O* is S70°E.
- *D* from *O* is S80°W.
