BASIC 8

WEEKLY LESSON PLAN – WEEK 3

Strand:	Environment		Sub-Strand:	Mapping Skills		
Content Standard:	B8.1.2.1. Demonstrate skills in sketching maps and interpreting landscapes from maps					
Indicator (s)	B8.1.2.1.1. Sketch maps and interpret landscapes from maps		Performance Indicator: Learners can locate directions to places using maps.			
Week Ending	26-01-2024					
Class	B.S.8	Class Size:		Duration:		
Subject	Social Studies					
Reference	Social Studies Curriculum, Teachers Resource Pack, Learners Resource Pack, Textbook.					
Teaching / Learning Resources	Poster, Word Chart, Pictures, Power Point Presentation, Video		Core Competencies:	• Critical Thinking and Problem Solving Communication and Collaboration.		
DAY/DATE	PHASE 1 : STARTER	PHASE 2: MAIN			PHASE 3: REFLECTION	
MONDAY	Discuss with Learners on the meaning of “Compass”.	<div>1. Learners brainstorm to identify the 4 cardinal Points.</div> <div>2. Using a Chart, draw and explain the 8 and 16-point compass.</div> <div>3. Demonstrate on how to use a map with grid squares to locate some important landmarks.</div> <div>Cardinal directions are the four main points of a compass: north, south, east, and west which are also known by the first letters: N, S, E, and W. These four directions are also known as cardinal points</div> <div></div> <div>The eight-point compass</div> <div>You can make your compass more accurate by adding more points to it. By drawing a line in between each of the cardinal points, you can create an eight-point compass that shows the directions for north-east (NE),</div>			Learners brainstorm to draw or sketch the map of their community indicating important landmarks.	Exercise; <div>1. What is Compass?</div> <div>2. State the 4 cardinal points.</div> <div>3. Draw the 8 and 16-point compass.</div>

		<p>south-east (SE), south-west (SW) and north-west (NW).</p>  <p>The 16-point compass</p> <p>For even more accurate readings, some compasses add eight more points to make a total of 16. Each of these points also has a direction. West-south-west (WSW) points to a direction west of south-west. Similarly, north-north-east (NNE) points north of north-east.</p> 	
FRIDAY	Assist Learners to Sketch a map of the school compound to scale.	<ol style="list-style-type: none">1. Learners brainstorm to use map to show directions to important places in the community.2. Demonstrate on how to use watch as compass.3. Show Learners a globe and describe how to locate points on the globe. <p>How to use the watch as a Compass</p>  <p>You can estimate approximate compass directions using the positions of the hour hand and the sun as a guide. Keep in mind that these determinations are approximate</p>	Learners brainstorm to sketch maps showing the positions or directions to the learners' homes using compass directions.

as discrepancies can arise at different latitudes and in different seasons.

1. Check that the watch is showing the correct time and then lay the watch horizontally and align the hour hand of the watch with the direction of the sun.

The point approximately mid-way between the 12 o'clock position on the dial and the direction of the hour hand when it is aligned with the sun indicates south.

Morning is on the left side of the dial, and afternoon is on the right side facing south.

2. Rotating bezel with a compass

Turning the rotating bezel so that the "S" points south will allow you to read other approximate compass directions.

Watches with a compass and non-rotating bezel

Turning the watch body so that the "S" faces south will allow you to read other approximate compass directions.

* In the southern hemisphere, the point approximately mid-way between the 12 o'clock position and the direction of the hour hand when it is aligned with the sun indicates north.
